

THE LED DIFFERENCE

FortisAlberta's LED streetlights

- » Colour Rendering Index (CRI)
 - » LED's selected CRI = 70 vs. HPS CRI = 20-21
- » The higher the numeric value the better the light source is at accurately displaying the color of an object

LED colour is *whiter* and may appear *brighter*, however, the lighting levels are equivalent.

LEDs offer better light quality with more even distribution of light.

INCREASED SAFETY AND SECURITY ON ROADWAYS
